RAKU® TOOL

EL-2203 / EH-2952-1, EH-2953-1

Epoxy Laminating Resin

Temperature resistant, unfilled, with fast or slow reactivity

© RAMPF Advanced Polymers GmbH & Co. KG MAEI - Rev.Status: 03-2025/07/11 - GB Page 1 / 2

Key Properties

Applications

- Low viscosity
- Excellent wetting properties
- Good cure at room temperature
- Temperature resistant up to 120°C

- Laminating molds
- RTM tools
- RIM tools
- Production of laminate parts
- Resin infusion

Processing

The processing temperature and material temperature should be between 20-25°C.

Degassing is recommended.

Impregnate each layer of cloths to construct the laminate layer by layer.

The mechanical properties and temperature resistance are only obtained through a post cure according to the recommended cure schedule.

Recommended cure schedule

After initial curing at room temperature for 12-24 hours depending on the size and thickness of the parts, the parts must be heated up to 120°C in steps and post cured for 14 hours at 120°C, then cooled down gradually. The curing time at room temperature, heating and cooling rate depend on the size and thickness of the parts.

Storage

Original containers should be kept tightly sealed and stored at ambient temperatures (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label. Partly used containers should always be sealed appropriately and used up as soon as possible.

Handling precautions

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
