Key Properties

- Easily shaped with wood working tools
- Good adhesion to most substructures

Applications

- Design and styling models
- Master models
- Molds

Processing Properties

		Unit	EP-2301	EH-2931

Processing

The processing temperature and material temperature should be between 20-25°C, never below 18°C.

Mix the two components thoroughly in the ratio indicated.

Avoid applying over 40 mm at once, for thicker layers it is recommended to apply the 2nd layer after the first one has gelled.

Small quantities can be mixed by hand. For larger quantities the use of a mixing machine is recommended.

Packaging	
RAKU® TOOL EP-2301	5 kg
RAKU® TOOL EH-2931	5 kg

Storage

Original containers should be kept tightly sealed and stored at ambient temperatures (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label. Partly used containers should always be sealed appropriately and used up as soon as possible.

Handling precautions

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
