#### **Processing**

#### The processing and material temperature should be between 68-77°F (20-25°C).

For best results, de-air the material prior to casting, then pressurize to 60 psi until cured.

The hardener component will darken as it ages. It is recommended that dry nitrogen be used to blanket the material to prevent or lengthen the time that it takes for this oxidization to occur. This oxidation can also occur with the cured materials, causing them to darken as they age.

#### **Packaging**

IE-3642 Quart Kit	2.5 lbs.
IE-3642 1 Gal. Kit	10 lbs.
IE-3642 5 Gal. Kit	50 lbs.
IE-3642 Drum Kit	562.5 lbs.

#### **Storage**

Original containers should be kept tightly sealed and stored at ambient temperatures 59-86°F (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label.

Partly used containers should always be sealed appropriately and used up as soon as possible.

#### **Handling Precautions**

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
