Key Properties

- Excellent physical properties after RT cure
- · Free of mercury, MOCA or TDI
- UL94 V-0 certified

Applications

- Approved for many medical applications including MRI coil housings
- Formulated for room temperature meter-mix dispensing systems and short mold cycle times

Processing

The processing and material temperature should be between 68-77°F (20-25°C).

RC-79D can be used at room temperature. Meter-mix equipment is recommended due to the short working life of the formulation. RC-79D has been engineered for medical applications and is MRI transparent. The resin and hardener components of RC-79D will separate during storage. Mix thoroughly before use to ensure that the formula is homogeneous. The hardener component may also freeze. If this occurs, warm the material to approximately 125°Funtil liquefied.

Agitate the hardener and resin before use to ensure that the formula is homogeneous.

Packaging		
RC-79D Quart Kit	4 lbs.	
RC-79D 1 Gal. Kit	16 lbs.	
RC-79D 5 Gal. Kit	80 lbs.	
RC-79D Drum Kit	900 lbs.	

Storage

Original containers should be kept tightly sealed and stored at ambient temperatures 59-86°F (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label.

Partly used containers should always be sealed appropriately and used up as soon as possible.

Handling Precautions

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
