#### **Key Properties**

- · Excellent physical properties after mild post cure
- Free of mercury, MOCA or TDI
- Tough polyethylene / polypropylene simulated product
- · Very low mixed viscosity

#### **Applications**

 For hand-batch processing, vacuum assist casting or meter mix dispense methods

#### **Processing**

#### The processing and material temperature should be between 68-77°F (20-25°C).

For best results, de-air material prior to casting, then pressurize to 60 psi until cured. If the mold is preheated to 150°F, the demold time will be reduced to an hour or less. This material does not have to be used in conjunction with heat. However, significant improvements in HDT are made when using the post cure methods above. The components can freeze when stored or shipped in temperatures below 32°F. In the event your

system freezes, call your RAMPF Group Inc. representative to discuss reconstitution methods.

Agitate the hardener and resin before use to ensure that the formula is homogeneous.

TP-4055 Quart Kit	3.52 lbs.
TP-4055 1 Gal. Kit	14.08 lbs.
TP-4055 5 Gal. Kit	70.4 lbs.

#### Storage

TP-4055 Drum Kit

Original containers should be kept tightly sealed and stored at ambient temperatures 59-86°F (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label.

Partly used containers should always be sealed appropriately and used up as soon as possible.

#### **Handling Precautions**

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
