**Wangen (Göppingen), Germany, September 23, 2025.** Due to the continued decline in orders in the mechanical engineering sector, particularly in the machine tool industry, RAMPF Machine Systems is streamlining its organizational structure. As part of a reconciliation of interests, the manufacturer of machine beds and frame components is reducing its workforce by 18 out of 101 positions at its headquarters in Wangen.

Marc Dizdarevic and Stefan Foroutan, CEOs of RAMPF Machine Systems – "The weak economy, rising costs for raw materials, energy, and labor, as well as increasing regulatory requirements are putting significant pressure on both our company and our customers. As a result, we must adapt our workforce to align with changing market conditions."

Michael Rampf, CEO of the RAMPF Group – "As a family-owned company, RAMPF stands for stability and long-term employment. This makes the decision to reduce our workforce all the more difficult. The Rampf family is personally deeply affected by this step. However, we are convinced that the measures we have taken will set the course for a positive future for the company and its employees. At the same time, we urgently call for political action – in particular, tangible relief from taxes, energy costs, and bureaucracy – to strengthen the competitiveness of Germany's mechanical engineering sector."

RAMPF Machine Systems is part of the international RAMPF Group, headquartered in Grafenberg near Metzingen, Germany. The Group employs around 900 people worldwide.

**RAMPF Machine Systems GmbH & Co. KG**, based in Wangen (Göppingen), Germany, is the leading supplier and development partner for system solutions, trunk machines, and basic machines, as well as multi-axis positioning and moving systems based on high-precision machine beds and machine bed components made from alternative materials.

The portfolio of high-performance materials includes mineral casting, ultra-high performance concrete (UHPC), natural hard stone, mineral casting Ultralight Flow, and steel composite constructions. These materials provide a solid basis for ultra-precise and high-performance machine beds and machine bed assemblies.

The full range of services provided by the company includes everything from engineering to production, as well as assembly, system solutions, customer-specific multi-axis positioning and moving systems, and basic machines – from single-piece to series production in customized supply chain solutions.

Using innovative casting, grinding, and lapping processes, as well as high-performance assembly and testing equipment in temperature-controlled production environments, exceptional accuracy of machine bases and basic machines is guaranteed.

RAMPF Machine Systems is a company of the international **RAMPF Group** based in Grafenberg, Germany.
